

Three-hospital mNGS registry: 105 specimens

KMUH 51 · TVGH 35 · TSGH 19 (master index K53 / T19 / V35 = 107 specimen-cases)
shared master workbook, case slide decks, laboratory grouped mNGS, clinical pathogen diagnoses

KMUH line: 33 patients with saved standardized inputs

8 clinical sections + 1 mNGS section per patient; 297 / 297 sections identical to the frozen upstream inputs; IDs kmuh_case_code (Pn ↔ Knnn) + specimen code workbook label found for 24 of 33; 9 without a same-label workbook candidate

Not delivered: 3

KMUH cases without a frozen R5 decision record

TVGH + TSGH line: 48 of 54 registry candidates

9 clinical sections + 1 grouped mNGS per patient; 480 / 480 identical; 6 patients with empty grouped mNGS (identity only); IDs legacy_global 54 → 48 exclusion recipe not fully documented

Not delivered: 23

outside the rich/moderate (20) and full-root (5) subsets

R5 delivery cohort: 55 patients (Fig. 2a,b)

KMUH 30 + TVGH/TSGH 25
518 candidates → 114 upstream picks + 9 R5 rescues = 123 selected
all 55 decisions replayed byte-identical from frozen intermediates
reference: physician-adjudicated pathogens, versioned revisions

30

25

Earlier ICU series: 35 patients (Fig. 2c,d)

KMUH, first pipeline version (Jan 2026 talk)
positive rate and organisms per patient overlap with the 55 / 41 sets unconfirmed

Direct-prompting comparison: 41 patients (Fig. 3)

KMUH 30 answer-positive + TVGH/TSGH 11 quality-A
identity-fixed payloads; 4 models × 41 = 164 frozen predictions
AETIA on the same 41: TP 69 · FP 33 · FN 7

Not compared: 14

two-hospital cases below input-quality grade A

Reference standard: causative pathogens adjudicated by the treating infectious-diseases physicians, with versioned revisions (KMUH answer overrides 2026-09-14; direct-prompting gold corrections 2026-09-12). Rule development inspected these labels: neither evaluation cohort is an untouched external test set. Amber boxes mark exclusion steps whose criteria are incompletely documented.

Counts: docs/Frontend.md, docs/COHORT_VALIDATION.json, docs/Validation.md (Multimodal-Diagnosis-Model, 2026-09-18).
